OBJECTIVE

Detail-oriented and motivated Data Analyst with hands-on training from EICT, IIT Roorkee and practical experience in Python, SQL, Excel, and Power BI. Skilled in data cleaning, visualization, and deriving actionable insights. Seeking an entry-level Data Analyst role to contribute analytical skills and continue growing in a data-driven environment.

SKILLS SUMMARY

Languages & Libraries: Python (Pandas, NumPy, Matplotlib, Seaborn, Plotly)
Databases & Query: SQL (MySQL, PostgreSQL) – data extraction, querying, aggregations
Visualization & BI Tools: Power BI (Data Modeling, DAX, Power Query, Interactive Dashboards)
Spreadsheet & Reporting: Microsoft Excel (Pivot Tables, VLOOKUP, Conditional Formatting, Power Query, Data Cleaning)
Cloud: AWS Cloud Fundamentals (CLF-C02)

EXPERIENCE

Data Analytics Certification Program | EICT, IIT Roorkee × Masai School *April 2025 – Present*

- Completed an intensive 6-month industry-focused program covering Python, SQL, Power BI, and Excel.
- Built end-to-end analysis projects covering data cleaning, EDA, and visualization on real-world datasets.

PROJECTS

Vrinda Store Data Analysis | *Excel* Personal Project

- Cleaned and transformed raw store data; built interactive dashboards to visualize sales trends and customer segments.
- Applied Power Query and data modeling to streamline reporting and deliver actionable business insights.

Swiggy Food Delivery Analysis | *Power BI* Personal Project

- Performed end-to-end data cleaning and transformation on 150K+ order records; developed DAX measures to compute total revenue (987M), order count, and user metrics segmented by gender, age group, cuisine, and city.
- Designed an interactive multi-filter dashboard with year-over-year revenue trend analysis (2017–2020), age-wise user distribution, and geographic city-level mapping using Power Query and data modeling.

Customer Churn Analysis | *Python* Personal Project

- Cleaned and preprocessed telecom customer churn dataset using Pandas and NumPy; handled missing values in TotalCharges, corrected data types, and removed duplicates to ensure data integrity.
- Performed exploratory data analysis (EDA) using Matplotlib and Seaborn to identify churn patterns by gender, senior citizen status, contract type, tenure, and monthly charges; derived actionable retention insights.

Pizza Sales Data Analysis | *SQL* Personal Project

- Wrote SQL queries to calculate total orders, revenue, and top-selling pizzas; performed time-based and category-wise analysis.

EDUCATION

Master of Business Administration (MBA) – Data Science *Expected June 2027*
Amity University, Noida, India

Bachelor of Computer Applications (BCA) *July 2024*
Greater Noida Institute of Technology, Greater Noida, India

CERTIFICATIONS

Deloitte – Data Analytics Job Simulation (Forage) *January 2026*
Data Analytics Certificate – EICT, IIT Roorkee (via Masai School) *Upon Completion*
SQL – Zero to Hero in SQL – Udemy
Excel – Basic to Advanced – Udemy
AWS Certified Cloud Practitioner CLF-C02 – Udemy *October 2024*
